

# Level 1: Python Foundation

## Task 1: Variable + Print

### Concept

Variable এ data রাখা আর `print()` দিয়ে দেখানো

### Question

`product_name = "Mouse", qty = 5` প্রিন্ট করো

### Code

```
product_name = "Mouse"
qty = 5
```

```
print(product_name)
print(qty)
```

### Output

```
Mouse
5
```

### Odoo Use

`record.name, record.qty` এগুলোই variable

---

## Task 2: Data Types + f-string

### Concept

`str, int, float` চেনা আর `f"{}"` দিয়ে format করা

### Question

`price = 250.50` কে সুন্দর করে প্রিন্ট করো

### Code

```
product = "Keyboard"
price = 250.50
```

```
print(f"Product: {product}, Price: {price}")
```

### Output

Product: Keyboard, Price: 250.5

### Odoo Use

Report আর Message এ f-string লাগে

---

## Task 3: If-Else Condition

### Concept

শর্ত দিয়ে Decision নেওয়া

### Question

qty = 15 হলে Stock OK, না হলে Low Stock

### Code

```
qty = 15
```

```
if qty > 10:  
    print("Stock OK")  
else:  
    print("Low Stock")
```

### Output

Stock OK

### Odoo Use

@api.constrains এ validation

---

## Task 4: List + Index

### Concept

একাধিক data একসাথে রাখা

## ? Question

`prices = [100, 250, 500]` থেকে 250 প্রিন্ট করো

### Code

```
prices = [100, 250, 500]

print(prices[1])
```

### Output

250

### Odoo Use

`self` মানে record এর list

---

## ✓ Task 5: For Loop Basic

### Concept

List এর প্রতিটা item এর জন্য code চালানো

## ? Question

সব price প্রিন্ট করো

### Code

```
prices = [100, 250, 500]

for price in prices:
    print(price)
```

### Output

100  
250  
500

### Odoo Use

`for rec in self:` এর base

---

## Level 2: Logic Building

### Task 6: Loop + Sum

#### Concept

List এর সব সংখ্যা যোগ করা

#### Question

`sales = [850, 2000, 650]` এর total বের করো

#### Code

```
sales = [850, 2000, 650]
```

```
total = 0
```

```
for amount in sales:
```

```
    total += amount
```

```
print(f"Total Sales: {total}")
```

#### Output

Total Sales: 3500

#### Odoo Use

```
sum(rec.amount for rec in self)
```

---

### Task 7: Loop + Max

#### Concept

List থেকে সবচেয়ে বড় সংখ্যা বের করা

#### Question

সবচেয়ে বড় sale বের করো

#### Code

```
sales = [850, 2000, 650]
```

```
max_sale = sales[0]

for amount in sales:
    if amount > max_sale:
        max_sale = amount

print(f"Max Sale: {max_sale}")
```

### **Output**

Max Sale: 2000

### **Odoo Use**

Dashboard এ highest sale দেখানো

---

## **Task 8: Loop + If Filter**

### **Concept**

শর্ত দিয়ে data count করা

### **Question**

1000 এর উপরে কয়টা sale আছে?

### **Code**

```
sales = [1200, 850, 2000, 650, 3000]

count = 0

for amount in sales:
    if amount > 1000:
        count += 1

print(f"High Value Sales: {count}")
```

### **Output**

High Value Sales: 3

### **Odoo Use**

```
filtered(lambda r: r.amount > 1000)
```

---

## ✓ Task 9: String + Loop

### 🎯 Concept

String এর প্রতিটা letter access করা

### ? Question

ODOO এর প্রতিটা letter আলাদা প্রিন্ট করো

### 💻 Code

```
text = "ODOO"
```

```
for letter in text:  
    print(letter)
```

### 🖥️ Output

O  
D  
O  
O

### 🔗 Odoob Use

`name.split()` টাইপ কাজ

---

## ✓ Task 10: List + append()

### 🎯 Concept

খালি list এ নতুন item যোগ করা

### ? Question

300 এর উপরে নতুন list বানাও

### 💻 Code

```
prices = [100, 250, 500]
```

```
high_prices = []
```

```
for price in prices:  
    if price > 300:
```

```
high_prices.append(price)
```

```
print(high_prices)
```

### Output

```
[500]
```

### Odoo Use

Manual `filtered()` version

---

## Task 11: Filter to New List

### Concept

শর্ত মিললে নতুন list বানানো

### Question

`>=1000` sales আলাদা করো

### Code

```
sales = [1200, 850, 2000, 650, 3000]
```

```
sales_high = []
```

```
for amount in sales:  
    if amount >= 1000:  
        sales_high.append(amount)
```

```
print(sales_high)
```

### Output

```
[1200, 2000, 3000]
```

### Odoo Use

```
records.filtered()
```

---

## Task 12: Sum + Count

## Concept

Loop এর ভিতরে multiple variable update করা

## Question

1000 এর উপরের sale এর Total আর Count বের করো

## Code

```
sales = [1200, 850, 2000, 650, 3000]
```

```
total = 0
```

```
count = 0
```

```
for amount in sales:
```

```
    if amount > 1000:
```

```
        total += amount
```

```
        count += 1
```

```
print(f"High Value Count: {count}")
```

```
print(f"High Value Total: {total}")
```

## Output

High Value Count: 3

High Value Total: 6200

## Odoo Use

Report Summary Card

---

## Task 13: Search + Flag

## Concept

List এ item আছে কিনা check করা

## Question

2000 আছে কিনা চেক করো

## Code

```
sales = [1200, 850, 2000, 650, 3000]
```

```
found = False
```

```
for amount in sales:
    if amount == 2000:
        found = True
        break
```

```
if found:
    print("Found")
else:
    print("Not Found")
```

### Output

Found

### Odoo Use

```
search([('id', '=', 2000)])
```

---

## Task 14: Average বের করা

### Concept

Total / Count formula

### Question

সব sales এর average বের করো

### Code

```
sales = [1200, 850, 2000, 650, 3000]
```

```
total = 0
```

```
for amount in sales:
    total += amount
```

```
average = total / len(sales)
```

```
print(f"Average Sale: {average}")
```

### Output

Average Sale: 1540.0

### Odoo Use

## Task 15: Loop + Min

### Concept

সবচেয়ে ছোট সংখ্যা বের করা

### Question

সবচেয়ে ছোট sale বের করো

### Code

```
sales = [1200, 850, 2000, 650, 3000]
```

```
min_value = sales[0]
```

```
for amount in sales:  
    if amount < min_value:  
        min_value = amount
```

```
print(f"Minimum Value: {min_value}")
```

### Output

Minimum Value: 650
